What have MCH
Students had to
say
about these
positions?

“Through my deployment as a Research Intern, **I have been gaining experiences and knowledge as a professional public health practitioner.** At the same time, I have been using skills through my own experiences and learnings from my MCH schooling to be able to turn the ideas into a reality and resulting in a successful internship. Of course, there were times when I felt unsure of myself and my abilities but this is why it was so important to rely on my team. In the end, **I feel I have grown a lot during my internship not only professionally, but personally as well..! I hope will inspire more people to take a chance, believe in themselves and just go for it! Even in these strange, stressful times, good things can and do happen, especially when you are surrounded by talented and inspiring people.”** -Myo Myo Aye

*Early Childhood Screening Research Internship Deployment
(Minneapolis Public Schools)*

Apply by July 18, 2022

“Something this deployment has taught me is that **advocating for health does not have to be complicated. If children can't see, they can't learn. If they can't learn, they fall behind in school.** Creating equitable vision access and allowing all children the proper eye treatment and glasses they need before kindergarten can eliminate the barriers of learning for every child in the nation. **I am beyond grateful for this phenomenal deployment experience. It has challenged me to see basic necessities such as proper eye treatment and glasses as a universal right for all children. Vision health was not my initial passion but once I decided to step out of my comfort zone and try learning and discovering a new aspect of health, it made me realize that my passion for health equity can be translated into all aspects of public health.”** -Bianca Zarders

Domestic Violence Prevention Intern (Indian Health Board)

This is the first time this deployment is being offered, allowing you to shape the role from its inception. You will also be working with recent MCH Program graduate (MPH 2022) Delilah Robb, who will be a wonderful mentor and supervisor as you complete your MCH Program.

Support domestic violence program programs activities and used culturally appropriate methods and strategies to increase awareness and prevention of domestic violence, child abuse and sexual violence at a Federally Qualified Health Center serving the urban American Indian population in the Minneapolis, MN.

National MCH Student Blog Co-Editor (Center for MCH)

Apply by July 18, 2022

“It has been such an honor to be one of the editors for the MCHLeads blog during the past two years of my MCH Program at the UMN! **...leading this blog with my team has been such a wonderful experience, providing me the chance to collaborate and learn from fellow MCHers from all over the country. I am so thankful for the opportunities the blog has provided me** and look forward to seeing how the blog will continue to prosper with the future MCH trainees!” -Alexis Chavez

“I am eternally grateful to have been selected as one of the attendees for the MLC Conference [to present the blog's impact]. Being a part of this conference was simply amazing; I learned so much from every individual at the conference, and meeting MCH students and professionals of all specialties across the nation was such a wonderful and enriching experience!”
-Alexis Chavez

"I enjoy my position as a co-editor of MCH Leads because it provides me with the opportunity to see the amazing work of MCH students across the country! I am always inspired by their projects, as well as their reflection on their work. It is exciting to see the potential of the upcoming MCH workforce!" -Alyssa Pochkar

Community Health Assessment and Project Intern (Hennepin County)

"... I've appreciated how **helpful** and **trustworthy** my supervisor has been. I have learned so much throughout this process and can owe that to how my supervisor has worked with me. **She provided insight where necessary and space for me to learn on my own when that was necessary.** This deployment has highlighted how everything in public health really is interconnected and working with an array of public health professionals can be extremely beneficial." —Lexie Adams

"Prior to the pandemic some leadership skills we gained were project and time management, as well as managing meetings with community health leaders. However, **during the pandemic, having to work remotely, we felt our leadership skills really strengthened.** We had to **take initiative during projects and strengthen our adaptability skills.** Although we still had direction from our supervisor, we would both need to problem solve on our own initially and then come together to collaborate." —Morgan Collins

Title V MCH Needs Assessment Intern (Minnesota Department of Health)

Apply by July 25, 2022

"Working with communities, instead of on communities, can also help drive a fundamental shift in public health. **Rather than only focusing on deficits and needs, communities and public health practitioners can highlight the strengths of communities and build upon those foundations.** As a new practitioner entering the field, I have learned skills to report data responsibly and equitably. My work with MDH has helped me identify areas of improvement and challenged me to have a strengths-based mindset. I look forward to incorporating these lessons into my work in the future."

—Kaitlyn Traub

"I learned a lot about collaborative grant management and grant writing/reporting. There are a lot of moving pieces involved in Title V funding and the necessary re-prioritization of resources to manage the COVID-19 created some unanticipated challenges. I learned so much about how grant money is distributed and what that process looks like on the federal and state level, how MDH partners across other government agencies ensure that goals are met and what is involved in making progress to improve maternal and child health across the state. I'm excited to take this knowledge of government agency work and state/federal funding forward with me..." —Alyssa Scott

Minnesota Pregnancy Risk Assessment Monitoring Systems (PRAMS) Intern (Minnesota Department of Health)

“Being able to participate in a long-term surveillance project at our state public health agency has allowed me to learn about the different stages evidence goes through from data collection, data entry, analysis, dissemination, and policy formation. Understanding the procedures your state public health agency follows to ensure we provide good data for evidence is essential to the policy-making process. If we cannot provide evidence about something that is a problem in our birthing community, it is hard to allocate funding and efforts to an ‘invisible’ public health problem.”

-Delaine Anderson
